Methodology

The survey findings presented in this release are based on the results of interviews conducted September 14-19, 2010. The interviews were conducted at the Center for Opinion Research at Franklin & Marshall College under the direction of the poll’s Director Dr. G. Terry Madonna, Head Methodologist Berwood Yost, and Senior Project Manager Angela Knittle. The data included in this release represent the responses of 464 registered adult residents of the 8th Congressional District in Pennsylvania, including 201 Democrats, 210 Republicans, 46 registered as Independent/Other, and 7 who refused to identify party. Telephone numbers for the survey were randomly generated using state voter registration lists. Voter Contact Services generated the sample using a registration-based sampling (RBS) scheme to identify survey respondents. A detailed description of the RBS scheme can be found on their website (http://www.vcsnet.com/rbshelp.html).

The sample error for registered adults is +/- 4.5 percentage points and is slightly higher for registered Democrats (+/- 6.9 percentage points) and registered Republicans (+/- 6.8 percentage points). The subsample of likely voters (n=379) has a sample error of +/- 5.0 percentage points.
In addition to sampling error, this poll is also subject to other sources of non-sampling error. Generally speaking, two sources of error concern researchers most. Non-response bias is created when selected participants either choose not to participate in the survey or are unavailable for interviewing. Response errors are the product of the question and answer process. Surveys that rely on self-reported behaviors and attitudes are susceptible to biases related to the way respondents process and respond to survey questions.

The Franklin & Marshall College Poll is produced in conjunction with the Philadelphia Daily News, WGAL-TV (South Central PA), Pittsburgh Tribune Review, WTAE-TV (Pittsburgh), WPVI-TV6/ABC (Philadelphia), Times-Shamrock Newspapers, Harrisburg Patriot-News, and Lancaster Newspapers. It may be used in whole or in part, provided any use is attributed to Franklin & Marshall College.
Key Findings

- In the 8th congressional district, Mike Fitzpatrick has an advantage over incumbent Patrick Murphy among all registered adults, 46% to 36%, with about one in five (17%) adults still undecided. Fitzpatrick’s advantage is larger among those more likely to vote, 49% to 35%, with 15% undecided. The survey finds that Fitzpatrick’s advantage increases as the likely voter screen becomes more restrictive.

- Two in five (41%) registered adults in the district rate Representative Murphy’s job performance as “excellent” or “good.” About the same proportion (40%) believe he deserves re-election while almost half (47%) believes it is time for a change.

- In the PA senate race, Pat Toomey leads Joe Sestak in the district among all registered adults, 39% to 30%, and among likely voters, 42% to 32%. In the gubernatorial race, Tom Corbett leads Dan Onorato among registered adults, 37% to 29%, and among likely voters, 40% to 30%. Many registered adults in the 8th CD are still undecided about their choices for US senate (30%) and governor (34%).

- Unemployment and the economy (57%) are the primary issues facing respondents and their families in the district.

- The positive job performance rating for President Obama (37%) is low in the district, but is similar to his overall state-wide ratings. Governor Rendell’s positive job performance rating (46%) is higher than the President’s in the district and is also higher than his overall state-wide rating.
