

CURRENT STATUS AS OF May 12, 2022

Campus Vaccination Data: May 12, 2022 (per January survey)

	Fully Vaccinated and Boosted	Vaccinated but not yet Boosted	Exempt	Missing or Incomplete Information
Students	82%	14%	4%	1%
FPS	85%	5%	3%	7%

Note: Percentages may not add to 100% due to rounding. As these are based on the January survey, and we are still receiving responses, they will not be fully compatible with data on vaccinations reported during the fall.

Number of Positive Cases (clinical and nonclinical)	Students	FPS
May 5 to May 11	7	2

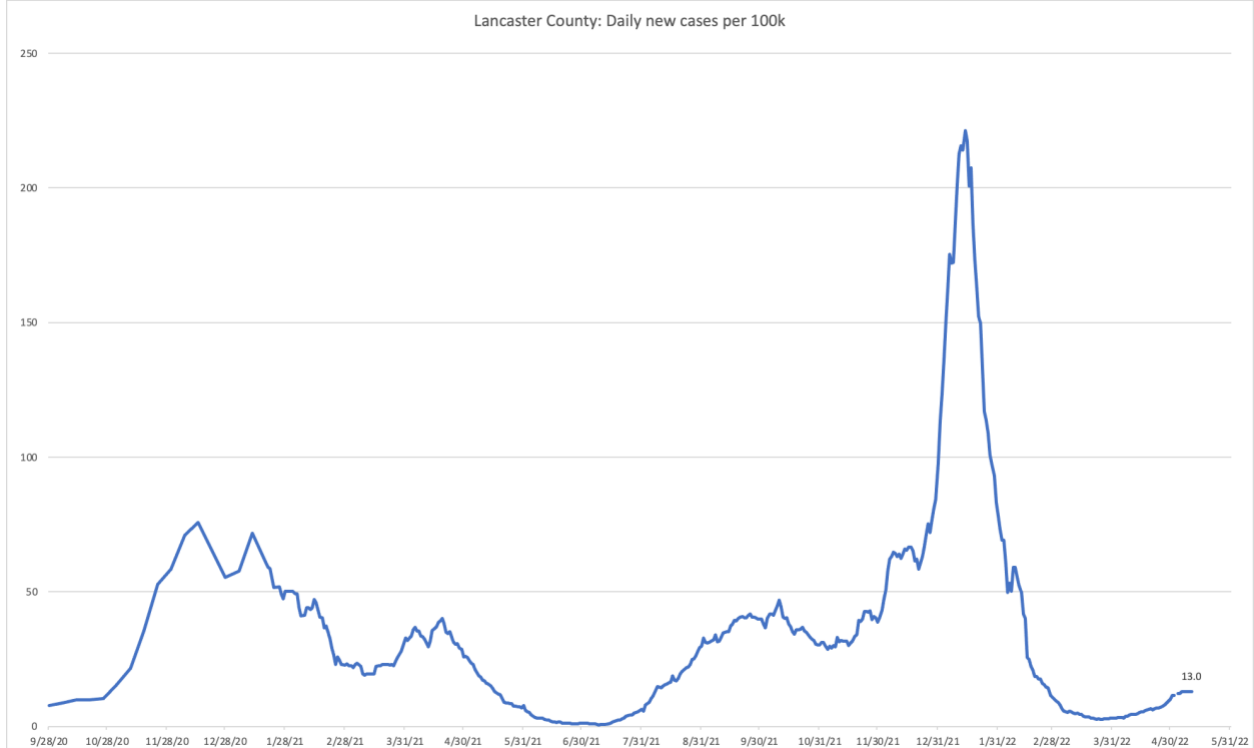

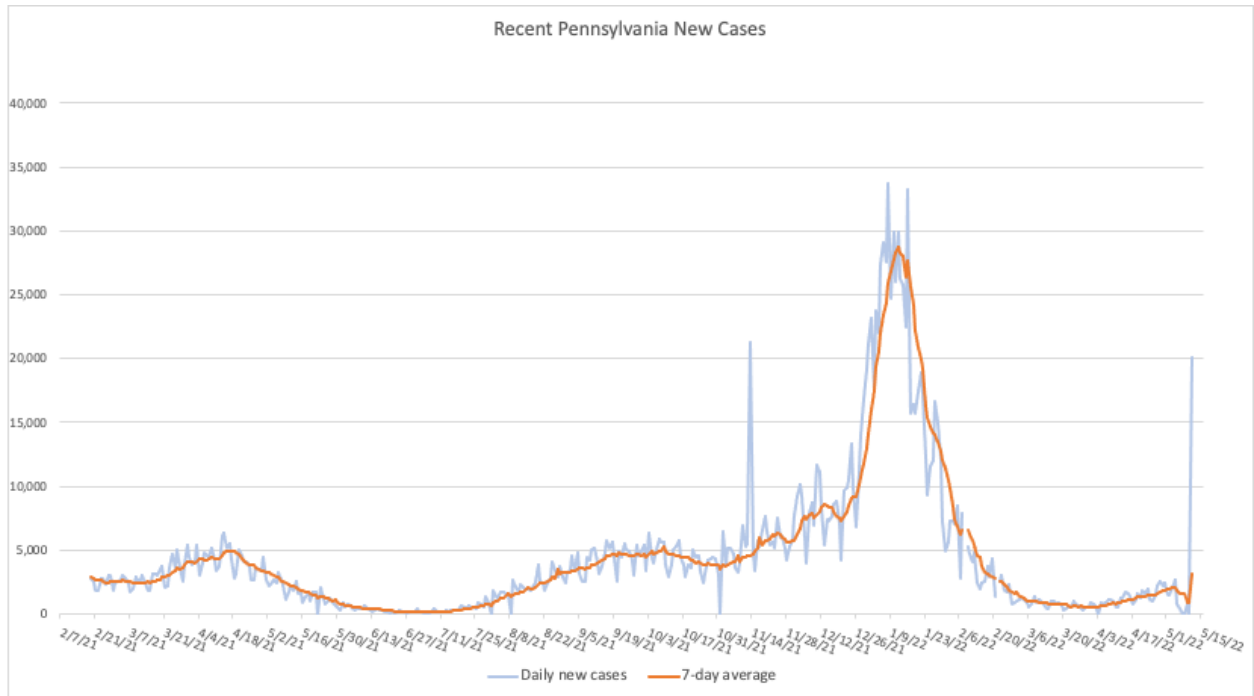

Note: One additional FPS case for the week of Feb. 17-23 has been included that was previously missed.

Students in Isolation Rooms (Marshall or Schnader, 21 rooms available)	
May 12	0

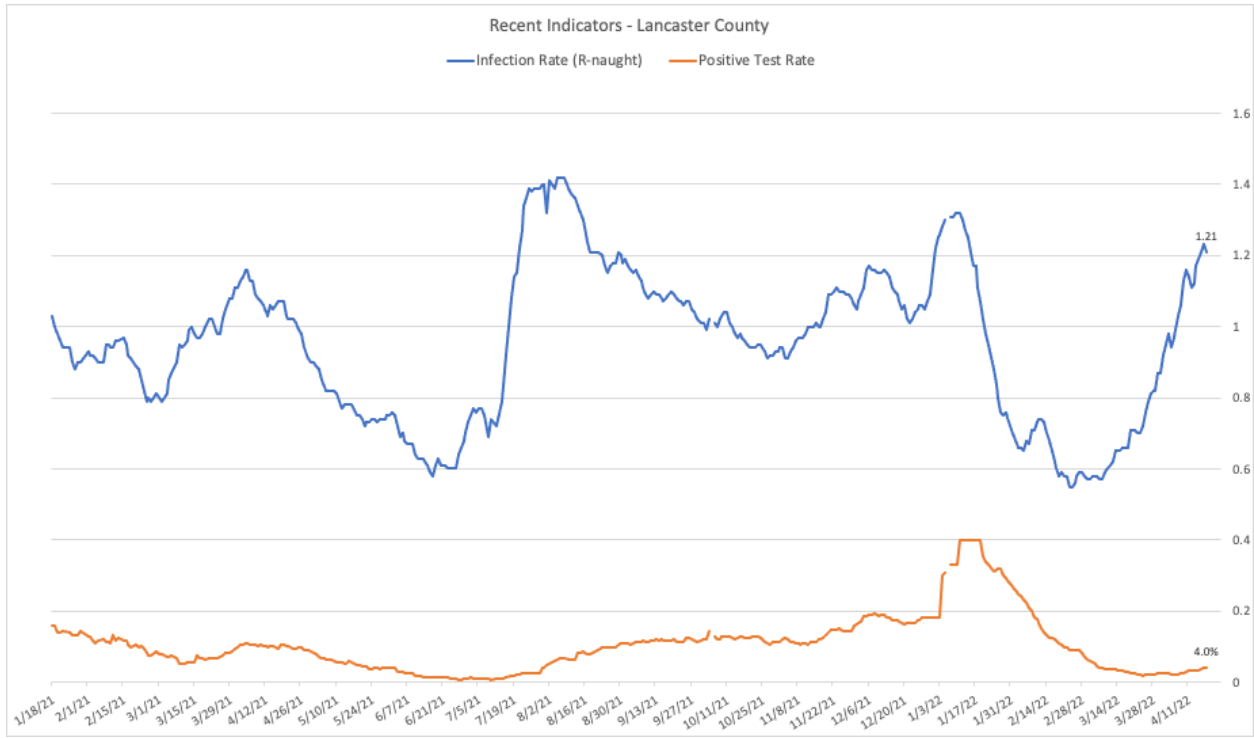

Note: Isolation refers to those who have tested positive. We have discontinued the tracking of those in quarantine (not a known positive) as they are rarely restricted in terms of their location.

External Indicators (May 12)

Note: In the past week, there are some data issues regarding the timing of reporting of cases in both Pennsylvania and Lancaster County. As a result, the last week of data should be interpreted cautiously.

Because of the above-mentioned data issue, it is likely that the 13.0 per 100,000 rate is an understatement of the current new infection rate in Lancaster County. From other sources, it seems that the current level is approximately 18 per 100,000 per day.

April 18 was the last day for which these data were reported.
